

GANSER LIFTSYSTEME

A safe ride to the top

A fabrication made in Austria for 100% 

Platform- stairlift GTL

High quality materials

Weatherproof and robust: Components of stainless steel and metal enable a smooth and safe ride as well as ensure personal safety and a visually pleasing product.

Control operated ergonomics

Simple and intuitive: Touch surface control buttons, which are also in braille, can be used for an almost effortless performance.

Informative display

Time and cost saving: By looking at this display all the necessary information is given at a glance for maintenance.

Stainless steel rail

Safety and stability: The resistant stainless steel guarantees a durable functionality and can also be used as a handrail.

Flexible chassis

Agile and versatile: An optional left or right-hand construction is possible, 0-50° adjustable; these models allow future modifications to be made and therefore ensure a longterm value maintenance.

Fully automated safety device

Protective and comfort: The anti-rolling mechanism, the contact data and the side-shaft mechanism all meet current security standards.

Vertical platformlift GHB

Stainless steel

By request all visible components can be made out of stainless steel.

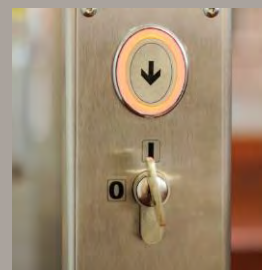

Color choice

In a traffic white (RAL9016), stainless steel or in RAL colours at choice the lifting ramp is integrated in its environment.

Loading ramp

Minimize your on site performance and trust in our moveable loading ramp, which provides a barrier-free access without a lift hole.

Exterior instruction

Call or send your vertical lift to the desired position. Optional with Eurokey or lock type to your choice.

Emergency drop

Optional this model can be equipped with an automatic, battery-operated emergency drop, which transports the construction downward in case of power failure.

Exterior instruction

Call or send your vertical lift to the desired position. Optional with Eurokey or lock type to your choice.
